

Canon DR-4010C Document Scanner

Canon has developed the DR-4010C, a new high-speed duplex color desktop document scanner, to enhance their Departmental Scanner series.

The Canon DR-4010C fulfills a wide variety of functionality requirements and meets market expectations as a high performance and cost-effective 'Departmental' document scanner.

While inheriting the latest features and proven reliability of Canon's popular DR-series scanners, the DR-4010C incorporates numerous new capabilities and advanced features, such as Automatic Color Detection, the ability to scan color and B/W documents in the same batch, a wider scanning sensor and a new user friendly ISIS/TWAIN interface. New image enhancement features include Advanced Text Enhancement Mode II, Improved Moiré Reduction for smoother images, and Bleed Through Prevention. Background Removal has been added.

The DR-4010C comes standard with the latest version of 'CapturePerfect' which offers a variety of innovative, yet easy-to-use software functions. As an added value Adobe® Acrobat® version 7, a world renowned imaging application, would eliminate the additional cost burden of the otherwise expensive software product.

- The DR-4010C employs an advanced **3-Line CMOS CIS sensor** to achieve ultra-fast color scanning at the same rapid rate as black-and-white 42ppm in simplex or 84 ipm in duplex.
 - Automatically remove black dots from a document with binder holes for a more legible, cleaner-looking image with **Punch Hole Removal function**.
 - Select a color range to remove from the scanned image with **Custom Color Dropout** for improved OCR results.
 - **NEW!** Featuring an **extra wide scanning sensor** of 9.3", which is wider than the maximum allowance of the document guide (8.6"). Even if a letter-size document is skewed, the DR-4010C will scan the complete image without cutting the corners of the image.
 - Features **Ultrasonic Double Feed Detection** to prevent lost images and ensure that every page of even large batches of documents are scanned.
 - For enhanced user friendliness, the new interface incorporates tabs for each setting's dialogue.
 - **NEW!** Unwanted Moiré patterns may be prevented by using the new improved **Moiré Reduction function**.
 - **NEW!** It is no longer necessary to separate color and black & white documents prior to scanning with the DR-4010C. The **Auto Color Detection** feature makes this a thing of the past.
 - In addition to a full-feature ISIS/TWAIN driver, the DR-4010C comes bundled with **CapturePerfect 3.0 and Adobe Acrobat 7.0 Standard** - giving you total scanning control from start to finish.
- NEW!** When scanning thin documents, the text or drawings on the backside may be visible on the scanned image. The **Bleed-Through-Prevention/ Background-Removal** function will prevent these unnecessary images. In addition, this function removes the background noise from Black & White, Grayscale or Color Scanning.
