

Cummins JetCount

Looking for a premium currency counter without the premium price? Then look no further than a Cummins JetCount®. Designed and built in the U.S.A., the JetCount currency counter exemplifies high quality and value. JetCount currency counters are compact, easy to use, and can help save valuable hours normally spent counting currency by hand.

With JetCount® Currency Counters:

- You can choose from three counting speeds. Currency can be counted at 1,600 bills per minute to make quick work of even the highest volumes of bills, or slowed down to 600 bills per minute to allow for closer monitoring during cash processing.
- Pre-set and adjustable strap limits provide fast selection of pre-set counts, plus the ability to adjust limits to any count from 1 to 100.
- All vital operating information, such as note counts, bill values, and operating modes, are presented in one easy-to-read LED display. You see clear numbers and words -- not colored lights and symbols.
- Adjustable, self-centering hopper guides easily adapt to accommodate documents of varying sizes and ensure that the documents travel through the JetCount's center for accurate counting.
